Benoît Quenaudon

Android Engineer – benoit@quenaudon.com – https://benoitquenaudon.com

I focus on delivering the best experience, to both users and fellow developers.

Professional Experience

Android Engineer   2018~Now@Cash App (Canada)

Working on Cash App: *mobile first financial platform with millions of active customers*

- Contributor to Cash App investing features: in close relation with PM/Design/Server teammates to help clearing things out and improving our performance as a team
- Helped refactoring our app with simpler abstraction and easier tests
- Maintainer of Wire, OSS library used by the whole organization for gRPC and protobuf APIs

Android Engineer   2015~2018@Cybozu (Japan)

Part of a 4-member team dedicated to improving the mobile experience among all Cybozu's services, B2B groupwares which offer schedules, apps, processes in the cloud.

- Modernized and built new features for all of Cybozu's Android apps while improving communication with PM/Designers to keep in pace with latest API changes and trends
- Enhanced productivity of daily tasks of all employees by building Chrome extensions
- Gave in-house talks: Android, Rx, Kotlin, DI, ES6, Rendering performance, RAIL performance model

Web Application Engineer   2011~2014@Synergy Marketing (Japan)

Helped build and maintain *Synergy! 360*, a CRM in the cloud. Also co-led a team of 15 and managed a team of seven.

- Defined the code guideline used in our codebase
- Reduced our release process from hours to minutes by automating our procedure
- Postgres tuning
